Your Trusted Partner in

Cloud Enablement

At DLH, we help our clients navigate a path forward by closing the gap between Cloud expectations and reality, identifying obstacles, and collaborating with decision makers to set realistic goals and expectations for Cloud initiatives. We support our clients to orchestrate a successful Cloud migration while reducing their risk exposure to security breaches and compliance violations by creating automated governance and workload management that encompasses multiple Cloud service providers. They include Microsoft Azure, Amazon Web Services (AWS), and Google Cloud, and their technologies.

Performance Areas

- Cloud Access Point and Cyber / Governance
- Hybrid, Multi-Cloud: Integrated Services Mix
- Cloud: DoD & IC at Impact Level-6 (Highside)
- Application Cloud Optimization – Transform / Shift
- Cloud-Born AppDev – Agnostic CI / CD Pipelines
- Multi-Petabyte Scale HPC as a Service
- Hybrid Cloud IaaS – containerization
- Service Mesh Framework Enablement (Istio)

Your Mission is Our Passion

Serving National Security & Intelligence, Civilian, and Private Sectors

DLH drives state-of-the-art innovations and solutions across the Civilian, National Security, and Intel communities, as well as the commercial industry. Our professional technical and engineering services deliver next-generation systems engineering, cybersecurity, technology insertion, and best practices-based Enterprise Operations (EOps) management.

Our geographically dispersed top-talent brings proven agility and innovation while maintaining compliance and governance. DLH stabilizes, optimizes, and transforms our clients' environments, realizing their must-have objectives of resilient, reliable, and forward-leaning technical efficiencies.

Challenges Solved

Implementing optimal poly-Cloud postures that meet compliance guidelines and requirements while maintaining scalability and flexibility.

Enabling multi-petabyte-scale high-performance storage and bioinformatics across poly-Cloud infrastructures for mission-critical trans-NIH initiatives, including the Trans-Omics for Precision Medicine (TOPMed); Science & Technology Research Infrastructure for Discovery, Experimentation, and Sustainability (STRIDES); and BioData Catalyst Programs.

Redefining Disaster Recovery (DR) and Continuity of Operations (COOP) strategies through secure, resilient, and ubiquitous on-/off-premise solutions, from servers to edge devices, while embracing automation to reduce recovery times.

Leveraging integrated, native Cloud services to optimize the power of the Cloud applied towards Defense, Civilian, and Health IT mission needs while maximizing Return on Investment (ROI), reducing Total Cost of Ownership (TCO), and delivering architectural alignment between Cloud services and core technologies.

Delivering mission-ready Cloud Cybersecurity Governance and Architecture, including Cloud Access Point management – from Impact Level 3 – Impact Level 6.

Implementing practical Hybrid and Multi-Cloud solutions to maximize platform strengths across Cloud Service Providers (CSPs) while optimizing data center operations against CSPs to evolve Infrastructure-as-a-Service (IaaS) and Infrastructure-as-Code (IaC) capabilities.

DLH Areas of Expertise

DLH leverages best-of-breed technology and industry best practices to enable our clients to optimize to the forefront of modernization and transformation. We deliver best-fit solutions for today, evolution pathways for the future, and unprecedented resilience in all things – technology, processes, and culture.

Cloud Enablement

DLH drives Cloud Smart adoption and enablement strategies that deliver practical optimization with compliance and security – fully leveraged for your mission, today and tomorrow.

Digital Transformation

Our experts facilitate rapid software delivery through modern scaled Agile frameworks and practices.

Big Data & AI/ML

Our data scientists and analysts help clients gain insights into their big data through data engineering, semantic modeling, predictive analytics, AI/ML, neural networks, deep learning, and data visualization.

DevSecOps

We don't just say we do DevSecOps, we help clients bring Dev and Ops together by implementing cultural change, integrating and left-shifting security, and operationalizing Continuous Integration and Continuous Delivery (CI/CD) pipelines.

Performance Based Logistics

We deliver full cradle-to-grave supply chain management, lifecycle management, and logistics support for IT systems as well as scientific and medical devices.

Cybersecurity Ecosystem

Our cyber solutions enable clients to confidently deploy secure platforms and technologies and protect their most critical data assets. Our Cyber Practice covers the entire security ecosystem – from crypto to policy.

Enterprise-Edge IT Management

We help clients realize greater efficiencies through IT infrastructure support (XaaS, SaaS, IaaS), comprehensive IT managed service delivery and technology automation.

Consulting

We provide the expertise to transform your enterprise environment by optimizing people, processes, and technology while affecting positive, mission-based organizational change.
