Your Trusted Partner in

# Platform Integration

We deliver full cradle-to-grave engineering, design documentation, system and software integration, training, supply chain management, lifecycle management, acquisition documentation and material management.

DLH performance Platform Integration solutions incorporate our engineering process and experience to designed and developed integrated solutions for C5ISR systems.

## Performance Areas

### Cybersecurity Support

- RMF/ATO Documentation
- Software integration
- Hardware and Software Testing

### Integration

- System Integration
- Production
- Cable Fabrication

### Engineering/Design

- Engineering Design Packages
- Engineering Change Proposals
- 3D Modeling/AutoCAD
- Prototype Development
- System Testing and Documentation
- Model-Based Systems Engineering (MBSE)

### Logistics

- Supply Chain Management
- Acquisition Management/Documentation
- Operator Training and Fielding
- Curriculum development
- Instruction/Video Course Dev.
- Inventory and Warehouse Mgmt.
- Life-Cycle Logistics

Your Mission is Our Passion

## Serving National Security & Intelligence, Civilian, and Private Sectors

DLH drives state-of-the-art innovations and solutions across the Civilian, National Security, and Intel communities, as well as the commercial industry. Our professional technical and engineering services deliver next-generation systems engineering, cybersecurity, technology insertion, and best practices-based Enterprise Operations (EOps) management.

Our geographically dispersed top-talent brings proven agility and innovation while maintaining compliance and governance. DLH stabilizes, optimizes, and transforms our clients' environments, realizing their must-have objectives of resilient, reliable, and forward-leaning technical efficiencies.

## U.S. Marine Corps

# USMC Communications Ground Radio/Combat Data Network

DLH is a leader in the engineering, design, and integration field, supporting DoD agencies with platform and systems integration on mobile, fixed, and modular platforms. DLH's agile, responsive capability allows our team to design, prototype, test, and collect feedback to develop solutions meeting our customers' needs. Our work supports MARCORSYSCOM with developing and validating integration solutions, engineering design packages, developing engineering change proposals, testing, and documenting configuration for the AN/MRC-145C and AN/MRC 148A Systems for the JLTV. This effort delivers a proof of concept and provides our customers with the information required to make critical program decisions. Our work with design, integration, and production of Tactical Network Systems such as the Wide Area Network Server Module-Heavy/Light, Individual Application Module and Application Server Module v2 supports the Common Host Environment for command and control and showcases our technical design and production capability. DLH's Cyber Test lab provides the capability to integrate and test software and hardware, validate the functionality of the products, and provide rapid results and essential test data for our customers.

## U.S. Marine Corps

# USMC Communications Ground Radio Training

DLH's team of Combat experienced SMEs develop curriculum and videos, and conducting training for new and existing systems such as THC2, MUOS, SATURN, MCHH, and HFR II providing our warfighters the capability to communicate and maintain command and control in a spectrum contested environment. Our implementation of a portable integrated virtual classroom environment enhances student learning with practical application for programming and configuring communication systems. During the COVID-19 Pandemic, our team developed training videos to continue providing critical training when onsite training and travel were restricted. Our team also provides SME technical support during validation testing and fielding events to validate system requirements and identify training gaps.

## DLH Areas of Expertise

DLH leverages best-of-breed technology and industry best practices to enable our clients to optimize to the forefront of modernization and transformation. We deliver best-fit solutions for today, evolution pathways for the future, and unprecedented resilience in all things – technology, processes, and culture.

### Cloud Enablement

DLH drives Cloud Smart adoption and enablement strategies that deliver practical optimization with compliance and security – fully leveraged for your mission, today and tomorrow.

### Digital Transformation

Our experts facilitate rapid software delivery through modern scaled Agile frameworks and practices.

### Big Data & AI/ML

Our data scientists and analysts help clients gain insights into their big data through data engineering, semantic modeling, predictive analytics, AI/ML, neural networks, deep learning, and data visualization.

### DevSecOps

We don't just say we do DevSecOps, we help clients bring Dev and Ops together by implementing cultural change, integrating and left-shifting security, and operationalizing Continuous Integration and Continuous Delivery (CI/CD) pipelines.

### Performance Based Logistics

We deliver full cradle-to-grave supply chain management, lifecycle management, and logistics support for IT systems as well as scientific and medical devices.

### Cybersecurity Ecosystem

Our cyber solutions enable clients to confidently deploy secure platforms and technologies and protect their most critical data assets. Our Cyber Practice covers the entire security ecosystem – from crypto to policy.

### Enterprise-Edge IT Management

We help clients realize greater efficiencies through IT infrastructure support (XaaS, SaaS, IaaS), comprehensive IT managed service delivery and technology automation.

### Consulting

We provide the expertise to transform your enterprise environment by optimizing people, processes, and technology while affecting positive, mission-based organizational change.
